

# Touch-to-Exit

## Brushed Stainless Electronic Touch-Plate

**For stand alone use or with access control systems**

Touch-to-Exit (TTE) is a low cost, touch sensitive unit designed for use with access control systems, and is an ideal replacement for conventional push buttons, door release buttons, and push to exit buttons. The entire faceplate is sensitive, not just a small central area. The lightest of touches will activate the unit, making it perfect for easy and fast egress and a boon for the elderly and disabled. TTE is a 'fit and forget' technology. It is fully self-calibrating, for life, and has absolutely no moving push-button parts. The faceplate is brushed stainless steel and available in 1 gang with the option of flush or surface mounting.

### Features:

- Low cost
- Touch sensitive plate – entire area of faceplate is sensitive
- 3 sensitivity settings via jumper – choose touch or proximity activation
- Operates with the lightest of touches, through gloves, or proximity
- For stand alone use or with access control solutions
- Perfect replacement for door release buttons, egress buttons, push to exit buttons
- Fast activation, ideal for fast egress
- Ideal for elderly and disabled – no pressure required, operates with the lightest of finger touches
- Perfect for installations that need to comply with the Disabilities Discrimination Act (DDA)
- Brushed stainless steel faceplate
- 'Fit and forget' technology. Fully self-calibrating, for life!
- No moving push-button parts
